Quadra fire pellet stove replacement parts

How to Order1. Select the service manual below corresponding to your model from the Service Parts drop down list below.2. Find the item needed in the catalog and enter the part number in the search box on our web site.3. Add the part(s) to the shopping cart and checkout.*If the part number in the manual does not show in the search on our website or if you need assistance locating the correct part, please Click Here.Click on Service Parts to select model: Jotul products are based on Norwegian cast-iron crafts and functional modern design, so they're both innovative and trend-resistant. Manufactured in Norway since 1853 and in Maine since 1980, Jotul has a large selection of cast-iron wood and gas stoves. Learn how to find Jotul replacement parts here Jotul Replacement PartsCast-iron parts are extremely durable and unlikely to deform, even after undergoing much use, which makes Jotul's products and parts reliable. If you do need a new part, however, they're simple to replace. Jotul's online library of discontinued products offers a downloadable pdf that breaks down the parts of hard-to-find models. Use the detailed illustration and the provided names and model numbers of parts, accessories and fasteners to determine the part you need. Jotul recommends using replacement parts from an authorized Jotul dealer only.Jotul DealersThis worldwide brand is sold in 43 countries on six continents and has a large dealer network in North America. In the United States, Jotul products are crafted in Norway and built in Maine. Local Jotul schools train all the dealers to ensure quality customer service. The Dealers tab on Jotul.com can help you find your local dealer to request a quote for a stove or fireplace insert as well as to locate replacement parts. Enter your zip code in the search bar to see the Jotul dealers nearest you. Jotul dealers can also give you advice on the type of chimney or wood stove, placement, chimney solutions, regulations and fire safety to consider.User ManualsWhile Jotul's F602 model is the most copied and sold fireplace in history, according to the company, some of the company's models are now obsolete. If you have a discontinued model, contact a local code enforcement officer, chimney sweep or Jotul dealer before operating your unit. The Jotul website has user manuals for obsolete models including the Surdiac, Petite, Allagash, Firelight, Combifire, Boxstove, 466 Coal and Wood Stove, 3TDC, 400 Double Door, Coal Stove and more. A downloadable pdf available on Jotul.com helps you to identify your wood, gas or coal stove with illustrations and a bulleted list of features. Removing an Old Fireplace or Wood StoveMany Jotul dealers will remove your old wood stove or fireplace and send it back to Jotul, where it is melted down and given new life as a modern chimney or wood stove. Bring a photo of the old wood stove or chimney to the dealer to get an estimate on the price to remove the existing installation and advice on local regulations. Prices typically go up for labor-intensive jobs that require tearing down a lot of brickwork. Approval, Inspection and ServiceTo assess the condition of an existing chimney, contact a Jotul dealer or your local chimney sweep association. Jotul dealers can also approve a new fireplace installation and send a report to the local authorities before you use it. A nearby chimney sweep can also inspect and approve the installation before you send documentation to the authorities. MORE FROM QUESTIONSANSWERED.NET We offer replacement parts for all Quadra-Fire pellet stoves. We stock the popular parts for the 900, 1000 and 1100i, Contour, 1200 Classic Bay, Castile, Mt. If you can not find the part you are looking for please call, e-mail or fill out our Parts Request Form and we would be happy to assist you. Pellet stoves are handy to have around, especially if you live in a colder climate. Not only do they keep your home warm and comfortable, but they also can be cost-efficient and save money on your heating bill. However, they aren't immune to problems, many of which you can fix.Poor Burn QualityIf your stove is burning poorly, more often than not the problem is that it just needs a good cleaning. Experts recommend cleaning your pellet stove at least once a year to keep it in good working condition. Be sure you clean the hopper, switches and auger plate. Make sure the exhaust pipe and any ventilation components are clean and free to do their jobs. Get rid of any debris that has built up anywhere on the stove. Clean the wiring, igniter and fire chamber, and always remove ashes properly. If you have questions about cleaning or maintenance, refer to your stove's manual.Trouble IgnitingIf your stove doesn't ignite on the first (or second or third) try, it could be your air-to-pellet ratio causing the problem. Try increasing air flow first to see if that helps. If it doesn't, check the power outlet. It seems simple, but you'd be surprised how often a flipped breaker switch causes issues. If the power is fine, make sure the pellets are feeding properly. The auger may be dirty or damaged, and the component may be clogged. Your auger's motor may need cleaning, oiling or a simple repair, which you can do with pliers.Excessive Ashes or SmokeShould your pellet stove produce too much ash, try feeding it pellets at a slower rate. Using shorter pellets often causes ash buildup. If your pellet stove produces excess smoke or smokes when you start it up, try cleaning the fire pot. Be sure to remove any visible clinkers. Remove all ash from the fire box, as well as from the ventilation, exhaust blower and heat exchange. Once you've finished, slow your feed rate to one fourth of an inch until the smoke stops puffing out of the stove.Dark or Dirty GlassIf the glass on your pellet stove is dark or smudgy, it's not usually a sign of a major problem. Most of the time, it's because you ran the pellet stove on low for too long. To fix it, simply clean the glass, and try running the stove on medium or high instead.Other General ProblemsFor other general problems with your pellet stove, there are some troubleshooting steps you can take to see if you can fix them. Cleaning, adjusting your air-to-pellet ratio, using pellets of a different size and adjusting heat settings can often help with a number of issues. You can also check for air leaks. Always buy high-quality pellets to help prevent problems like clogging and debris buildup. MORE FROM QUESTIONSANSWERED.NET Quadra Fire Pellets Stoves are manufactured right in their home town of Colville, Washington, where it opened a state of the art pellet stove manufacturing facility. These stove offer sustainable, eco friendly heating solutions for any living space. Some places to find these parts for your heater include big-box hardware stores, smaller hardware stores, manufacturers, repair services and online auction or classified ad websites.Big Box Hardware Stores for Heater PartsBig-box, or large-chain, hardware stores are a place to look for heater parts, such as Harbor Breeze replacement parts. Write down all the information you have about your heat source like brand, model number, serial number and the part name and number if you have it. If you aren't able to compare the broken part physically to the one in the store or on the store's website, consider taking some photos of it from different angles for comparison. Also, put the part against a metal scale or ruler so that you have information about dimensions on hand when shopping for the replacement part.Small Hardware Stores for Heater PartsSmall hardware stores can be another source for heater parts, such as Honeywell replacement parts. Prepare a list of details about the part that include as much information as you can get, the same way you would for shopping at a big box hardware store. A photo can be helpful for confirming the part is the same as the original before you buy it.Manufacturers Websites for Heater PartsFor some hard-to-find heater parts, the manufacturer's website or a dealer may be the only place you can find what you need, such as Amana furnace replacement parts. Have the model number handy as well as the serial number of your heater if possible to narrow the search quickly. If you can't find it on the website, you may need to use the company's customer service phone number or an online contact form to request information about getting the part you need.Repair and Specialty Services for Heater PartsRepair and specialty services are another place you can check for heater parts, especially parts that are hard to find, such as some Mr. Heater replacement parts. The repair person may have access to specialized parts you can't get or may have technical knowledge on how to bypass a part or even know a suitable replacement part that will work even though it's different than the original heater part.Finding Heater Parts at Online Auctions and Classified Ad WebsitesOne additional place you may be able to find heart parts for broken heaters is from independent sellers. Consider checking auction websites and classified ad websites for used parts that still have life in them, such as used Lasko replacement parts. Pay extra attention to part numbers because parts may not be returnable with private sellers, and check the location of sellers because shipping may increase the cost of the parts you buy from these online venues.
